

Requirements Manager System Test Plan

Document Author(s): Ray Wang

Date: 9/26/2022

Introduction

The System Test Plan provides test cases that exercise several paths through the RequirementsManager requirements, with a focus on checking for conflicts between activities.

To run the tests:

1. Right click on RequirementsManagerGUI class in the Package Explorer.
2. Select Run As > Java Application

The GUI opens and displays the menu to create a new project, load a list of projects and user stories from a file, save the current list of projects and user stories to a file, and quit. There are buttons to select the active project, list user stories, add a user story, delete a user story, and edit a user story.

Test ID	Description	Expected Results	Actual Results
Test Case 1: Open Application	Preconditions: 1. Run the RequirementsManagerGUI class 2. <i>Check results</i>	- Upon running the RequirementsManager application, the GUI should open to display a menu. This menu should have the options to create a new project, load a list of projects and user stories from a file, save the current list of projects and user stories to a file, and quit. - There should be an empty drop down menu next to "Current Project", and four buttons (Update Project, Add User Story, Delete User Story, and Edit User Story).	- After running the RequirementsManagerGUI class, the application opens to show the Requirements Manager. There is no current project selected and there are no user stories displayed in the table. - There is an empty drop down menu next to "Current Project", and four buttons (Update Project, Add User Story, Delete User Story, and Edit User Story) as expected.
Test Case 2: Create Project	Preconditions: Test Case 1 has passed 1. Run the RequirementsManager application 2. Click on File in the top left 3. Click on New 4. Enter "TestScheduler" for the name of the project and click OK 5. <i>Check results</i>	- Once you click on create a new project and enter in the name, an empty list of user stories should appear and the inputted name should be displayed as the project name of the active project	- After clicking on File > New, typing in the provided name, and clicking OK, the empty drop down menu next to "Current Project" is now showing "TestScheduler" - The user stories table is still empty as this new project does not have any user stories yet.
Test Case 3: Load Project – Valid File	Preconditions: Test Case 1 and 2 have passed 1. Run the RequirementsManager application 2. Click on File in the top left	- Upon selecting "test-files/project2.txt" and loading it, the user story table should be populated with the user stories of the WolfScheduler project which should be the current project.	- After loading the project2 file, the Current Project (which was originally TestScheduler from the previous test case) automatically changes to

	3. Click on Load 4. Select "test-files/project2.txt" and click Open 5. <i>Check results</i>	- The user stories displayed should be: > 0,Completed,Load Catalog,sesmith5 > 1,Verifying,Select Course,jctetter > 2,Working,Add Event,ignacioxd > 3,Backlog,Export Schedule > 4,Submitted,Change Title > 5,Rejected,Post to Piazza	WolfScheduler. The user stories of WolfScheduler are also displayed in the user story table. - The user story fields match the expected results.
Test Case 4: Load Project – Invalid File	Preconditions: Test Case 1, 2, and 3 have passed 1. Run the RequirementsManager application 2. Click on File in the top left 3. Click on Load 4. In the "File Name" text box at the bottom, type in "invalid-file" and click Open 5. <i>Check results</i>	- Upon clicking Open to attempt to load "invalid-file", a dialog should open with the message "Unable to load file."	- After trying to load the "invalid-file" file which does not exist, a message is displayed saying "Unable to load file."
Test Case 5: Add User Story	Preconditions: Test Case 1 and 2 have passed 1. Run the RequirementsManager application. If your application is already open from the previous test case, close it and run the application again. 2. Click on File in the top left 3. Click on New 4. Type in "Test5" and click OK 5. Click Add User Story 6. Type in: Title: Testing As a: Tester I want to: Test my program So I can: Check if my work is done right 7. Click Add to Project 8. <i>Check results</i>	- After adding the user story, you should see Test5 selected in the Current Project drop down menu. You should also see a user story added to the previously empty user story table. - The user story table should show: > 0,Submitted,Testing	- After creating the Test5 project and adding the user story with the provided information, a user story appears in the Test5 project. - The user story details match the expected results.
Test Case 6: Delete User Story	Preconditions: Test Case 1, 2, and 5 have passed 1. Continuing from Test Case 5, click on Add User Story 2. Type in: Title: Debugging As a: Coder I want to: Debug errors So I can: Solve failing tests 3. Click Add to Project 4. <i>Check results</i> 5. Select the first user story in the table (0,Submitted,Testing) and click	- After adding the user story to the project "Test5", there should be two user stories showing up in the table. - The user story table should show: > 0,Submitted,Testing > 1,Submitted,Debugging - After clicking on Delete User Story, the first user story should disappear and you should only see one user story left in the user story table:	- After adding the user story with the provided information, it appears in the user story table. - The user story details match the expected results - After deleting the first user story, it disappears and there is only one user story left in the table. - The user story details match the expected results

	Delete User Story <i>6. Check results</i>	> 1, Submitted, Debugging	
Test Case 7: Save Project	Preconditions: Test Case 1, 2, 5, and 6 have passed. 1. Continuing from Test Case 6, click on File in the top left. 2. Click on Save 3. Select the test-files folder 4. Type in "Test7" as the file name 6. <i>Check results</i>	- After typing in the file name, you should be able to refresh your project and see "Test7" under your test-files folder. - The Test7 file should contain: # Test5 * 1, Submitted, Debugging, - Coder - Debug errors - Solve failing tests	- After saving the project, I can see Test7 which has appeared in my test-files folder. - The contents of the file "Test7" match the expected results.
